balance areas:

- Generation (Kruonis PSP and Kaunas HPP)  
(plan vs fact = imbalance)
- Import – export (plan vs fact = imbalance)
- Production and consumption  
(plan vs fact = imbalance)

# Trade scheme for Lithuania in Estlink price area

# Trading at LT Day ahead changes

## Last year

*Producer acts as an exporter and willing to sell electricity into Estlink price area:*

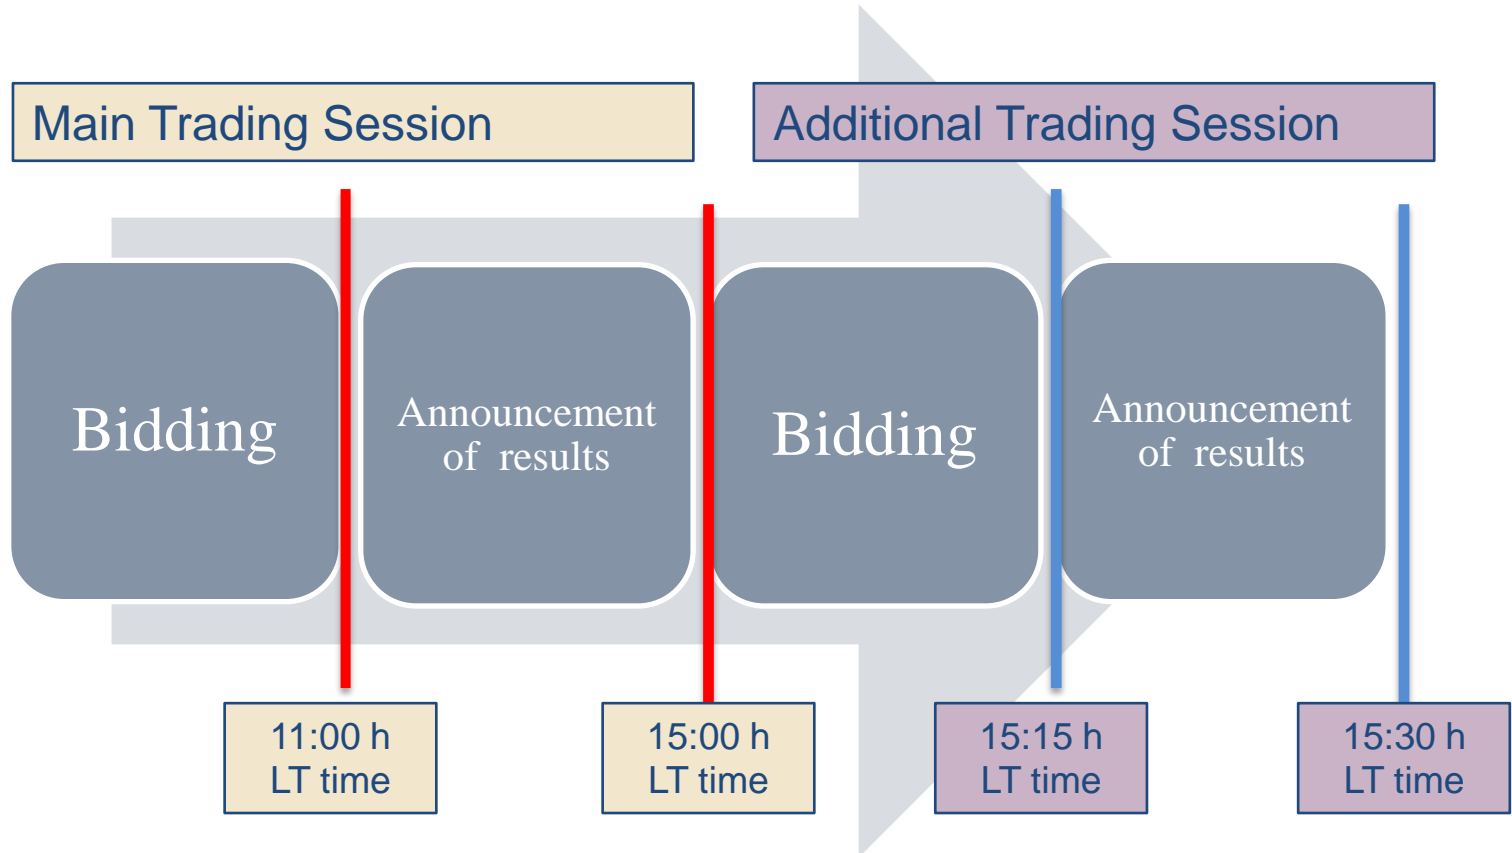

- It places bids into LT exchange (showing the export from LT) and at the same time it places bids with the same quantity into Estlink price area. The time of placing bids in Baltpool and Estlink is the same as it is also the same of getting results from both exchanges.*
- If all quantity has been sold in Estlink price area there is no problem.*
- If all quantity has not been sold in Estlink (only part of it) LT producers gets imbalance for difference between export shown in Baltpool and sold quantity in Estlink.*

## Today

*Producer acts as an exporter and willing to sell electricity into Estlink price area:*

- If all quantity has not been sold in Estlink (only part of it) LT producers have possibility participate in additional trading session after the end of the main trading session of the Lithuanian Day Ahead Power Exchange.*

# Trade scheme in LT PEX

# Wishes for future LT EM development

- Changes in balance management (settlement, pricing)
- Intraday trading
- Data exchange principles
- Transparency

Thanks for attention
