Capacity Management

Capacity calculation

- Baltic TSOs agreed to have bilateral methodologies for capacity calculation on the cross borders.
 - AST and Elering have agreed on the capacity calculation rules of EE-LV cross border.
 - AST and Litgrid have agreed on the capacity calculation rules of LT-LV cross border.

Capacity allocation

- No changes since MoU between Baltic TSOs
 - EE-LV border allocation: 20% by explicit auction, 80% by Nord Pool Spot capacity optimization.
 - LV-LT border allocation: 100% by BALTPOOL capacity optimization.

NPS BEMIP Ad Hoc Group FBCa

Issue

- Baltic market development towards implicit auction highlights importance of Cross border connections.
- Because of high meshed grid the physical CB flows differ from commercial CB flows

Target

- Study the possibilities of implementation of flow based method between the Baltic countries.
- Develop the efficient capacity allocation mechanism in the Baltic countries performed by Nord Pool Spot.

Thank you!
